ASSESSING NEPTUNE ENERGY’S ECONOMIC IMPACT

A study of Neptune Energy’s operations in the UK, Norway, The Netherlands and Germany
Overview of the impact analysis
Channels through which Neptune Energy contributes to the economy

Neptune employs staff and our operations generate GDP.

We also spend money with our suppliers who employ staff and generate GDP. They use other suppliers in turn.

Employees (including those of Neptune’s suppliers) spend their wages in the wider economy, generating more GDP and jobs.

Added together, these three effects – direct, indirect and induced – comprise the total core economic impact of Neptune.

Neptune’s impact is measured using:
Gross value added, which is the contribution of a firm to GDP. It is easiest thought of as the value of output sold less the value of inputs used up to create that output.
Employment, which is measured on a headcount basis for comparison with official employment data.
Tax receipts, which are the value of taxes borne or collected.
Neptune Energy’s economic impact 2018

**DIRECT IMPACT**

Neptune directly generated a $1.7 billion gross value added contribution to the four countries’ GDP, and employed 1,200 people.

- $673 million collected and paid in taxes across the four countries in 2018.
  - The vast majority of this was paid in direct taxes to the Norwegian government ($536 million).
  - Note: Losses brought forward extinguished taxable profits in the UK. In Germany, no corporate tax was payable as the company generated taxable losses for the period.

**INDIRECT IMPACT**

- $724 million spent on operational and capital goods and services from a wide range of sectors.
  - This supported an estimated $599 million gross value added contribution to the countries’ GDP and 4,700 jobs.
  - 59% of capital expenditure was on goods and services to develop and operate oil and gas assets, such as drilling and wellhead equipment.

**INDUCED IMPACT**

- $199 million on employee compensation payments, with an estimated $91 million spent in the consumer economy.
  - Staff at Neptune’s suppliers also spend part of their salaries, jointly supporting $317 million gross value added contribution to GDP and 3,500 jobs.

**TOTAL IMPACT**

Neptune supported an estimated $2.6 billion gross value added contribution to the four countries’ GDP. This is equivalent to 0.61% of Norway’s GDP.

We also supported 9,400 jobs – for every Neptune employee, seven jobs are supported elsewhere in the region.
Assessing Neptune Energy’s Economic Impact

Neptune Energy’s total impact on the UK economy, 2018

- **$422 million** in gross value added contributions to UK GDP.
  - This implies a GVA multiplier of 2.0, for every $1 GVA directly generated by Neptune Energy, another $1.0 are supported elsewhere in the UK economy.

- **2,100 jobs** – For every Neptune employee in the UK, around 28 jobs are supported elsewhere in the domestic economy. This is primarily due to Neptune’s spend on capital goods and services in the UK.

---

**About Neptune in the UK**

We are an active offshore operator in the UK, with substantial North Sea interests in gas production, subsea development and exploration. We operate the Cygnus gas field, the UK’s largest single producing field, which supplies the equivalent of 1.5 million homes. Neptune Energy is a key component of the UK energy infrastructure, capable of supplying around 12% of domestic gas demand via its operated Cygnus and Gjøa platforms.
Assessing Neptune Energy’s Economic Impact

Neptune Energy’s total impact on the Norwegian economy, 2018

- **$1.4 billion** in gross value added contributions to Norwegian GDP, equivalent to 0.32% of Norwegian GDP in 2018.
  - This implies a GVA multiplier of 1.3, for every $1 GVA directly generated by Neptune Energy, another $0.3 are supported elsewhere in the Norwegian economy.
- **1,400 jobs** – For every Neptune employee in Norway, around five jobs are supported elsewhere in the domestic economy.
- Norway had the biggest spend of the four countries on capital goods purchases, with the majority spent on drilling rigs with local suppliers.
- A substantial proportion of Norway’s direct GVA was on taxes paid to the Norwegian government.

---

About Neptune in Norway

We are the fifth largest independent operator on the Norwegian continental shelf. Norwegian fields make up the largest proportion of Neptune’s portfolio. We operate 13 of the 68 licences in which we have interests. Gjøa is the largest operated asset in the Neptune portfolio and was the first floating production platform in the world to be powered sustainably by onshore facilities.
Neptune Energy’s total impact on the Dutch economy, 2018

- **$490 million** in gross value added contributions to Dutch GDP.
  - This implies a GVA multiplier of 1.6, for every $1 GVA directly generated by Neptune Energy, another $0.6 are supported elsewhere in the Dutch economy.
- **2,800 jobs** – For every Neptune employee in The Netherlands around eight jobs are supported elsewhere in the domestic economy.
- The Netherlands had the largest spend of the four countries on operational goods and services, mainly driven by expenditures on helicopter transport and contractor labour.

**About Neptune in The Netherlands**

We are the largest offshore operator in the Dutch sector of the North Sea. We operate 45 licences and maintain a large infrastructure of 32 offshore facilities including four major production complexes. We are participating in a pilot project in The Netherlands to create the world’s first offshore green hydrogen plant. As part of the project, three energy systems will be integrated on one platform: offshore wind, offshore gas and hydrogen.
Neptune Energy’s total impact on the German economy, 2018

- **$334 million** in gross value added contributions to German GDP.
  - This implies a GVA multiplier of 2.4, for every $1 GVA directly generated by Neptune Energy, another $1.4 are supported elsewhere in the German economy.
- **3,100 jobs** – For every Neptune employee in Germany around five jobs are supported elsewhere in the domestic economy.
- Germany was the largest beneficiary of induced GVA out of the four countries, as German employees tend to spend a larger portion of their salaries domestically.

About Neptune in Germany

Neptune businesses have been present in Germany for 130 years. We are active right across the country, with our main assets concentrated in the North German basin, the Altmark and the Rhine Valley. Our diverse gas and liquid production portfolio includes fields at various stages of the cycle. We supply 6.4% of Germany’s natural gas and 13% of its produced oil.
